

# Prostate Cancer HRA

Date: 08-15-2024

## Your Result

Discuss Screening

Talk to a health care professional about the possible benefits and risks of screening for prostate cancer.

- Men over age 49 are at increased risk of developing prostate cancer.

## View Your Risk Factors

Open any Risk Factor below to learn more about your risk and what you can change.

Age Risk

Increased Risk

Age Risk

Age 50 or older  
Increased Risk

Prostate cancer is rare in men younger than age 50. The chance of developing prostate cancer goes up as men get older.

Ethnicity Risk

Average Risk 

Ethnicity Risk

Not African-American ethnicity  
Average Risk

Prostate cancer is more common among African-American men than Caucasian men. For reasons not fully understood, African-American men with prostate cancer are more likely to die from the disease than white men.

Family History Risk

Average Risk 

Family History Risk

No family history of early PCa  
Average Risk

Prostate cancer (PCa) is caused by changes in certain genes. These gene changes (variants) usually happen by chance and aren't passed from parent to child. Most men who have a close relative with prostate cancer will never develop the disease. But gene changes can run in families and increase prostate cancer risk.

Take Your Next Steps

Based on your results, we recommend seeing your doctor for a consult.
