

Cogito & Caboodle

Powering analytics. Driving better decisions.

What they do

Caboodle is Epic's data warehouse

It provides data models used for analytical reporting.

Clairity is Epic's relational database

It organizes clinical and operational data for analysis.

Cogito is the analytics engine

It powers dashboards, reports, and predictive models.

Together, they let you

Track outcomes, segment patients, and measure campaign performance.

How we can help

Ensure proper tagging

Ensure you are correctly tagged for more analytics, not just the baseline Epic tags.

Data integration

Non Epic data integration into Epic, and data export of Epic data into a data warehouse or lake.

Custom reporting

Custom reporting to supplement the baseline Epic reports.

Segmentation

Advanced segmentation to target the right patients and measure impact.
